- PORT SCANNING IS USED TO PROBE A HOST OR SERVER TO IDENTIFY OPEN, CLOSED PORTS.

- I HAVE USED "NMAP" TOOL TO IDENTIFY THE OPEN AND CLOSED PORTS FOR THE TARGETED WEBSITE.

- IN 'NMAP' WE GET A GRAPHICAL USER INTERFACE WHICH MAKES EASY TO SCAN THE PORTS.

TARGET: mcehassan.ac.in

ON OBSERVING DIFFERENT TYPES OF SCAN. WE CAN CONCLUDE THAT THESE ARE THE PORTS WHICH ARE OPENED AND CLOSED.
